SENIOR SOFTWARE ENGINEER | FULL STACK

Senior Software Engineer with 4+ years of experience building scalable web applications and real-time systems using Node.js, Angular, React, and cloud platforms. Experienced in backend architecture, performance optimization, WebRTC streaming, and distributed systems.

Proven ability to design and deliver high-impact features in production systems used by thousands of users, including remote proctoring platforms, real-time video streaming infrastructure, and high-performance APIs.

CORE SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3

Backend: Node.js, Express.js, NestJS, REST APIs, Microservices

Frontend: Angular, React.js, Vue.js

Databases: MongoDB, PostgreSQL, MySQL, SQL Server, Redis

Real-time & Streaming: WebRTC, WebSockets, FFmpeg, Media Streaming

Architecture: Microservices, Event-driven systems, Performance Optimization

Testing: Jest, Mocha, Chai, Jasmine, Karma

Cloud & DevOps: AWS, GCP, Git, CI/CD

EXPERIENCE

MERITTRAC SERVICES PRIVATE LIMITED – Bangalore, India

Senior Software Engineer | Nov 2024 – Present

Developing and optimizing large-scale remote proctoring and online examination monitoring systems used in secure online assessments.

Key Contributions:

- Developed a server-side iPhone streaming feature for the remote proctoring platform enabling stable video transmission from mobile devices to monitoring dashboards.
- Built media processing pipelines using WebRTC and FFmpeg to support real-time video ingestion, encoding, and streaming for proctor monitoring systems.
- Optimized WebRTC usage by reusing existing connections between tile screen view and detailed candidate monitoring view, reducing connection overhead and improving performance.
- Enhanced credibility score processing logic by implementing a fair-queue based aggregation mechanism to efficiently process candidate anomaly signals in real time.
- Refactored core monitoring components to improve application responsiveness during large-scale online examination sessions.
- Improved backend API performance and system throughput to support higher concurrency during exam sessions.
- Built responsive proctor monitoring dashboards using Angular, TypeScript, HTML5, and CSS3 for real-time candidate observation.

Engineering Impact:

- Delivered performance optimizations that improved system scalability during large concurrent examinations.
- Enhanced real-time monitoring reliability for proctors handling large candidate volumes.

KNEXTA TECHNOLOGIES LLP – Bengaluru, India

Software Developer | Dec 2021 – Oct 2024

- Led development of a Medical Insurance Renewal Management System using Node.js, Express, and PostgreSQL improving renewal efficiency by 30%.

- Built event-driven backend workflows for policy renewals, proposal generation, and automated document generation.
- Implemented 20+ complex forms using Zod validation across Vue.js and React.js improving data validation accuracy and UX.
- Migrated a weather forecasting platform backend from PHP to Node.js improving maintainability and system performance.
- Automated post-payment workflows using Python integrated with Node.js backend services.
- Integrated Stripe payment gateway into ERP platform improving transaction speed and reliability.
- Developed dynamic PDF generation systems using HTML, CSS, Vue.js, and jQuery to generate thousands of customer documents.
- Designed Redis caching layers for invoice management systems improving database performance and reducing latency.
- Built phishing detection APIs and leaderboard features using TypeScript and Express.js.

EDUCATION

Bachelor of Computer Applications (BCA)

The New College, Chennai | 2018 – 2021 | GPA: 7.6

CERTIFICATIONS

System Design – Scalar (Aug 2024)

Getting Started with Docker – Skillshare (Dec 2023)

Developing SQL Databases – Skillshare (Nov 2023)
